KCC REQUEST

End user manual

KAMOTO
COPPER COMPANY S.A.

FOREWORD

KCC Request for Service is an application designed to allow all users of Kamoto Copper Company (KCC SA) to make requests. It consists of different modules, which are:

- Electronic Work Request;
- Report an IT Problem;
- IT Request;
- Radio & CCTV Request;
- Recruitment; and
- Training Request.

This system allows:

- Every user to submit service requests, requests for radios, requests for work … by following an approval workflow within his department;
- To follow up the approval of his requests, understand the position and whether or not a request is being processed;
- The user can view comments made by the approvers through a notification email, and if a request has been returned for a reason clearly specified by the approver.

How do you access the application?

To connect to the application, the user must follow the link https://kccrequest.ktg.cd.glencore.net/ or access the company's Intranet page via the following link https://intranet.ktg.cd.glencore.net/ by clicking on the link KCC Request for Service

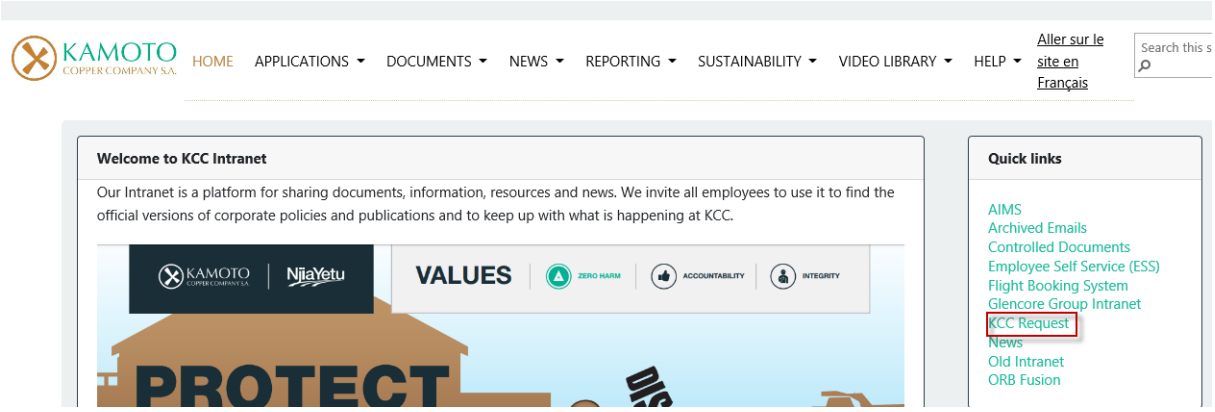

Fig.1

Please note that in this version, all users automatically have access to the application.

Presentation of Menus

HOME

The HOME menu gives the general appearance of all KCC Request for Service modules with an overview of all the features of the system as well as the number of requests for each module.

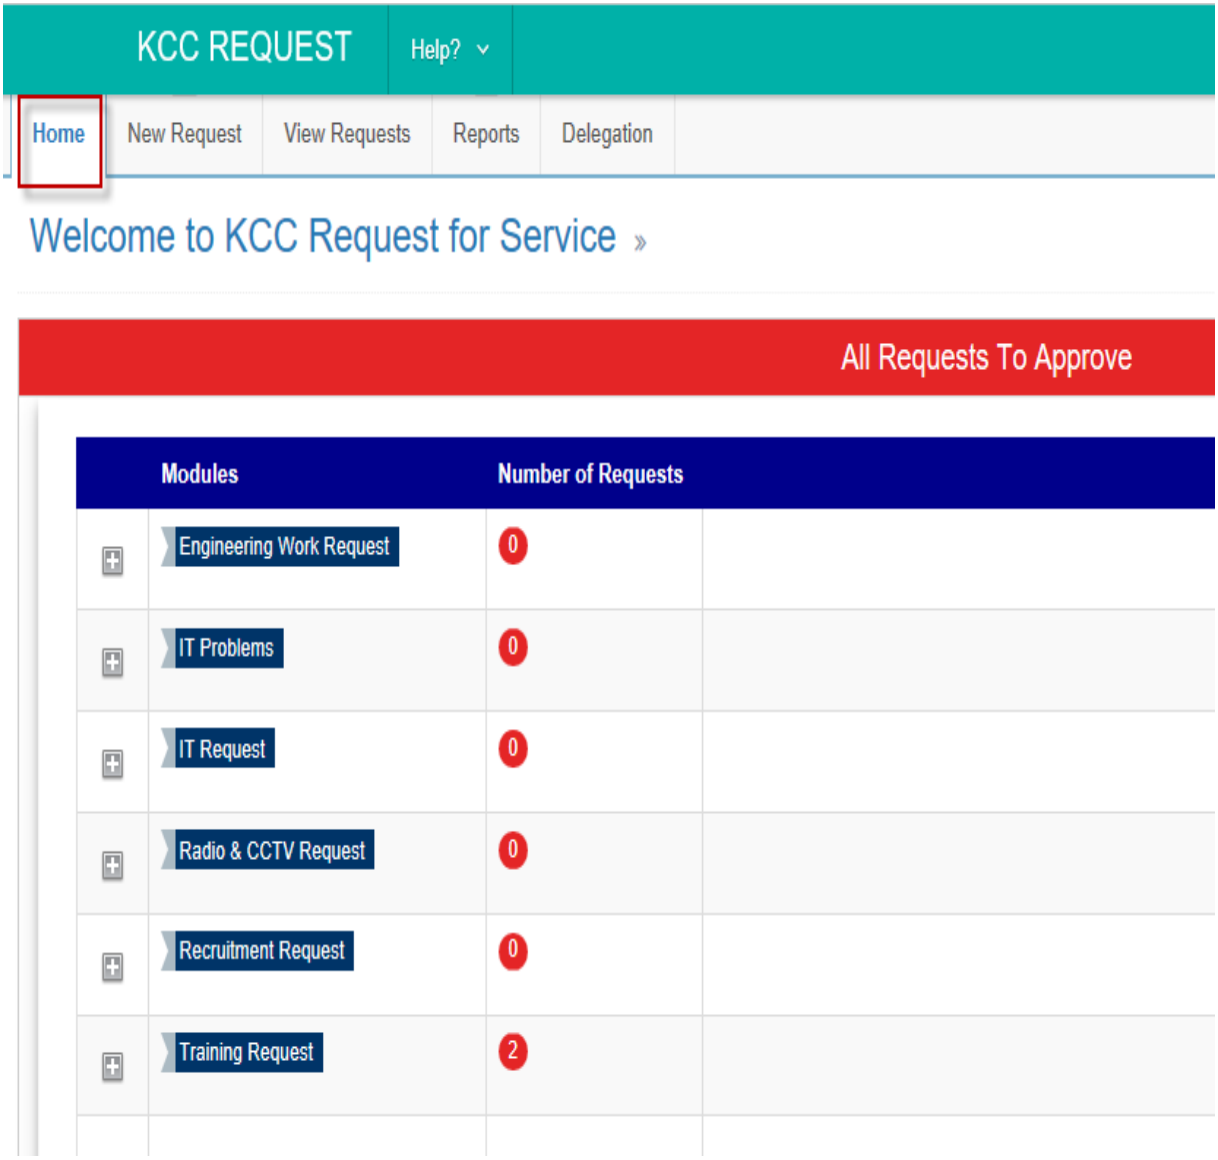

Fig.2

NEW REQUEST

The ***New request*** menu allows the user to create a new IT service request. By clicking on this menu, it opens the list of all modules, which include KCC Request for Service.

In this menu, each module gives you a form, which allows you to enter the different details of the requisition.

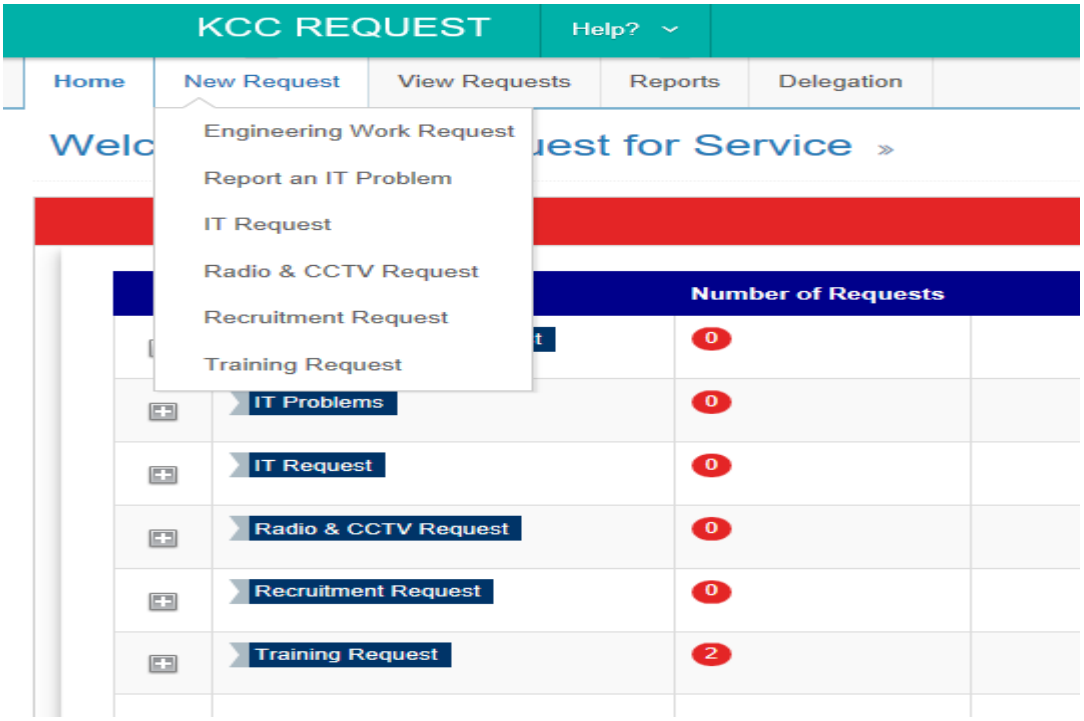

Fig.3

SEE REQUESTS

The ***See requests*** menu has two sub-menus, which are

- ***All requests to approve***, which allows the user to view all requests pending approval. This sub menu is more relevant to the approvers.
  There is also, on the one hand, notification mails, which arrive in the approver's, email Inbox, which sends them on to him direct in Requests to be approved, by clicking on a link
- ***All my requests*** allows the user to see all requests, which only he has already submitted.

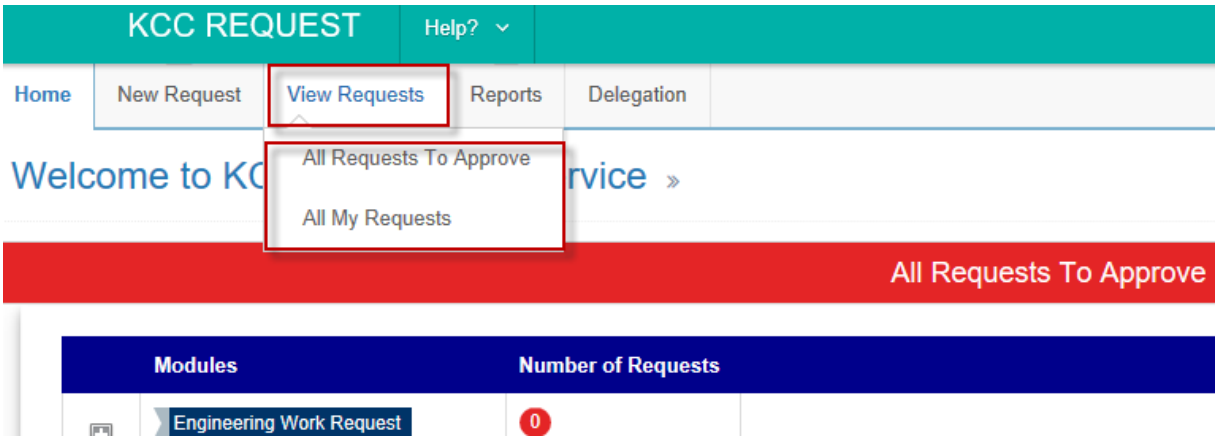

Fig.4

REPORTS

This menu allows the user to see certain information relating to his department's approval circuit. Access to this menu is limited to certain users. Only the authorised user may have access to consult this information.

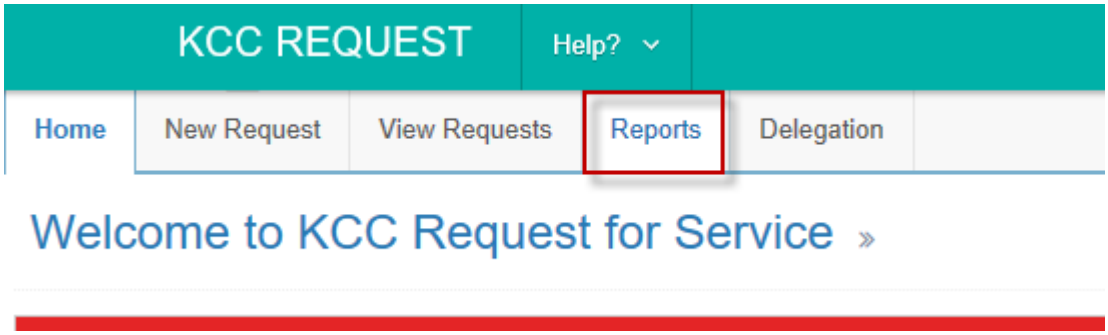

Fig.5

To see the information, simply click on the Reports menu, in the ***Select a Report*** field, select one of the reports concerned from the list, and the report is displayed automatically. Apart from the **Checking User Profile** report, or by introducing the user's employee number, he must click on the **View Report** button to view the content of the report.

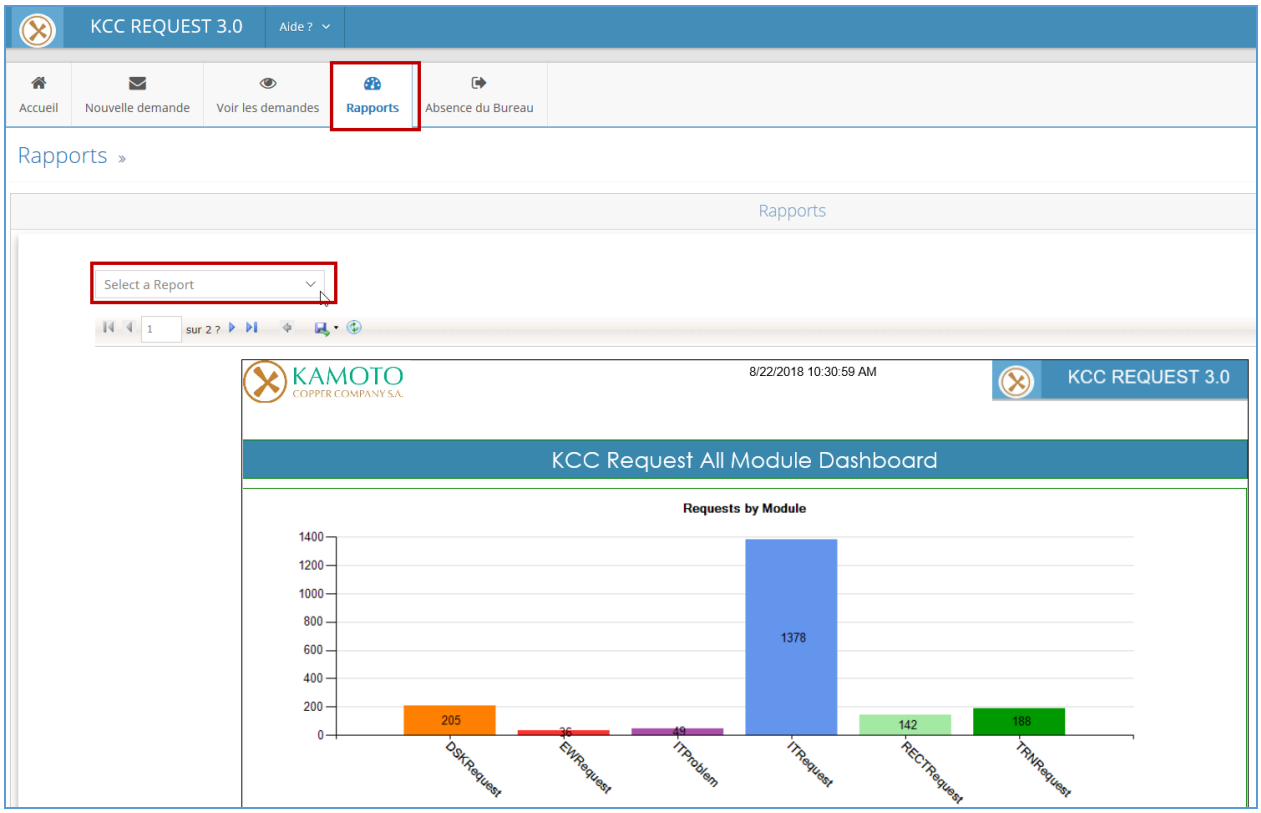

Fig.6

These reports can be exported in other formats, such as PDF, Excel, Word, etc.

To export them, you only need to click on the Export button  by selecting the format of your choice.

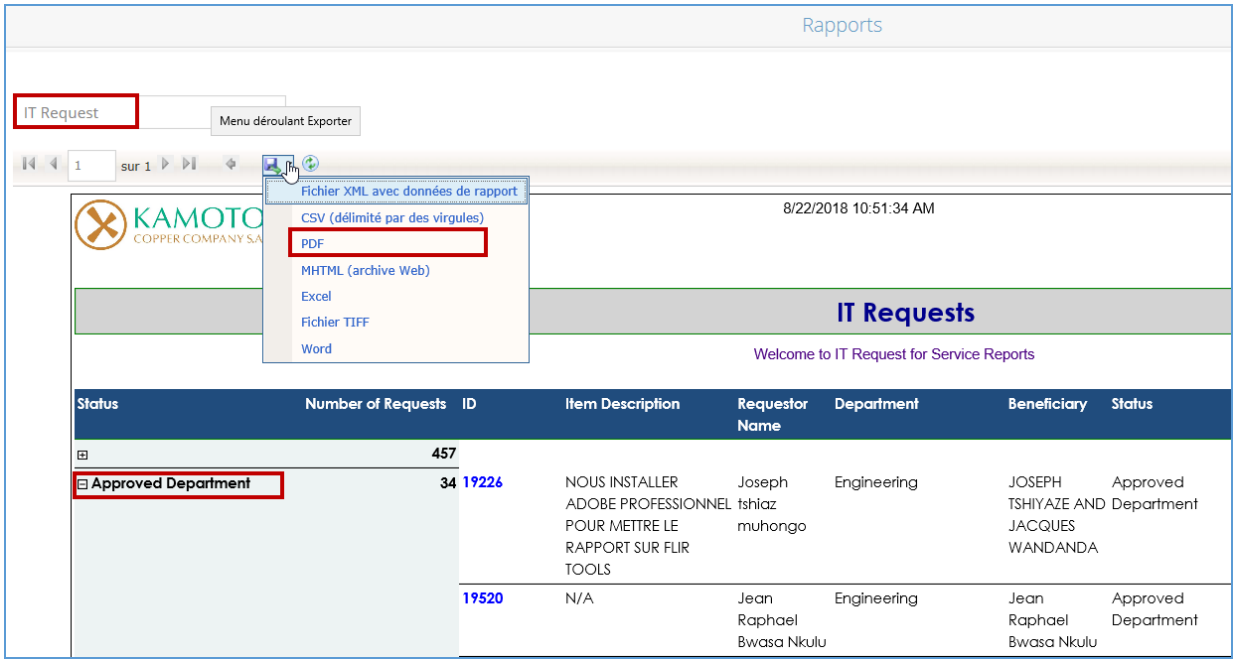

Fig.7

The explorer displays the dialogue box below to give the user the opportunity of opening the Report, saving it on his local disk drive, or even cancelling the export.

Fig.8

DELEGATION

This menu has a feature, which allows the user to delegate his approvals to a person of his choice.

When you click on this menu, the form of delegation for Absence from Office is displayed with the fields below:

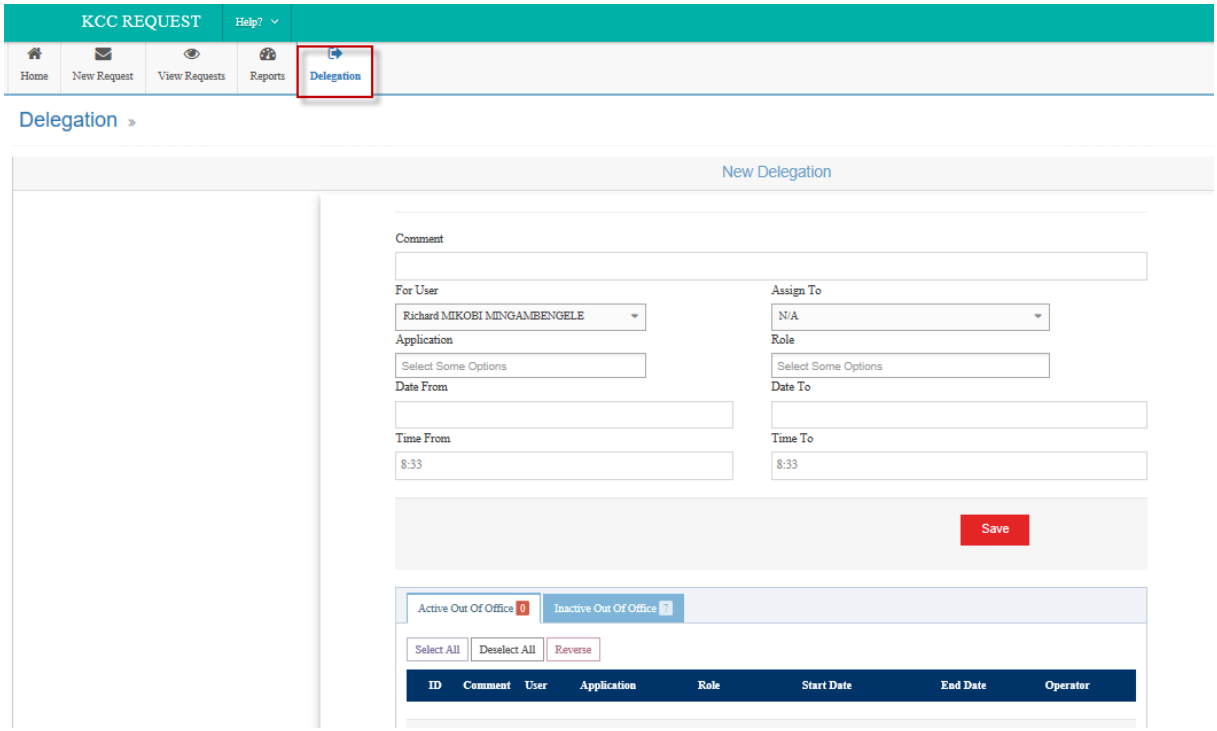

Fig.9

Note	Insert a brief comment explaining why you are absent from the office.
User	This field defaults to your name
Assign To	This field allows you to select the person to whom you delegate your approvals
Application	Allows the selection of one or all of the applications for which you wish to delegate approvals
Role	Allows the selection of one or more roles which you delegate
Start Date	The date on which the delegation begins
End Date	The date on which the delegation ends
Time interval for	Allows you to define the time from which the delegation will be effective.
To	Allows you to define the time when the delegation will end.

Note that all active delegations will be displayed in the grid below. You can disable a delegation of Absence from Office by clicking on the button….

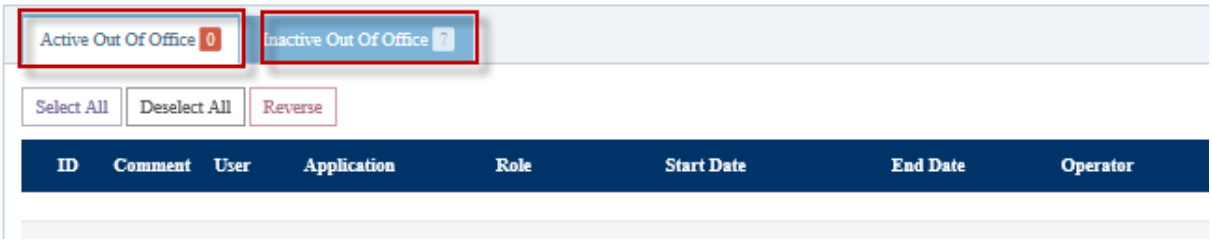

Fig.10

Note: *For each module, after registration the user will have a confirmation message below, and will then click on the OK button to validate the registration of the request (sometimes this message differs from one module to another).*

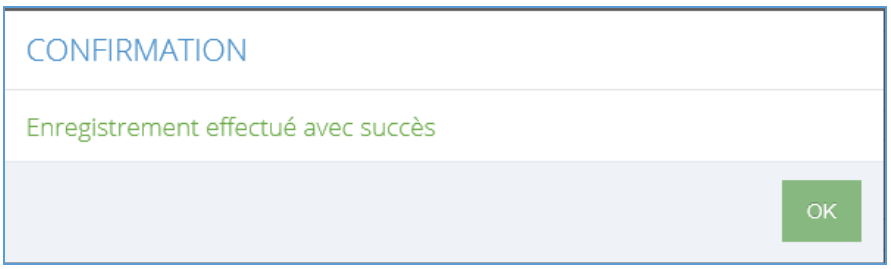

Fig.11

ENGINEERING WORK REQUEST Module

- *What does this system offer?*

This system facilitates the management of work orders requested by different departments within KCC.

This Electronic Work Request module presents the features, which enable users to submit different work requests.

- *Creation of the request*

  - How do you create a work request?

To create a work request, the user must go on the ***New Application*** menu and select the Electronic Work Request module. The form for the creation of a work request will begin with different fields to be filled out before submission; in addition, the user will be able to attach a document, which justifies his request.

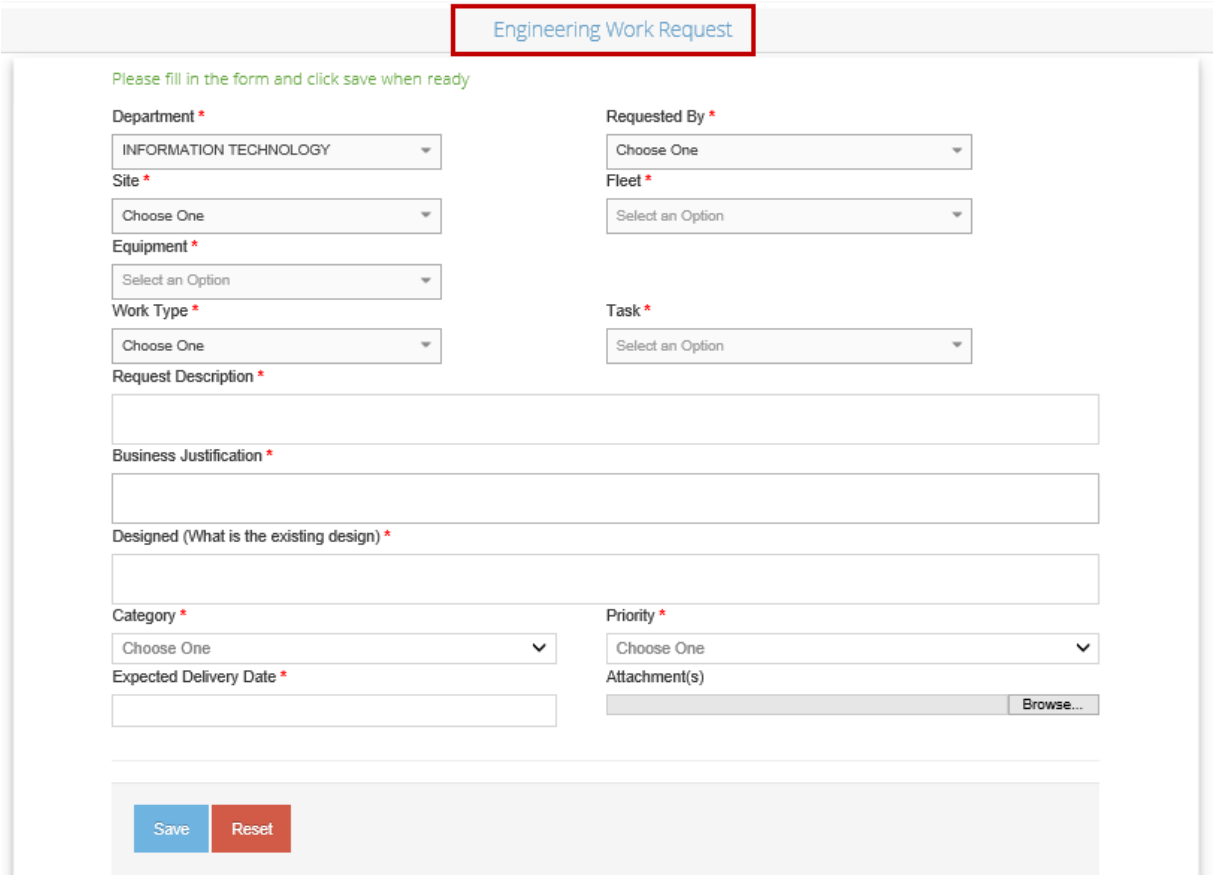

Fig. 1

Note: All fields are mandatory: fill them out and save your request at the end of the operation

REQUESTS TO APPROVE

How do you approve a work request?

To approve an Electronic Work Request, the approver must click on the ***See requests*** menu, and in the sub-menu **Requests to approve,** he will see the list of requests on which approval is pending.

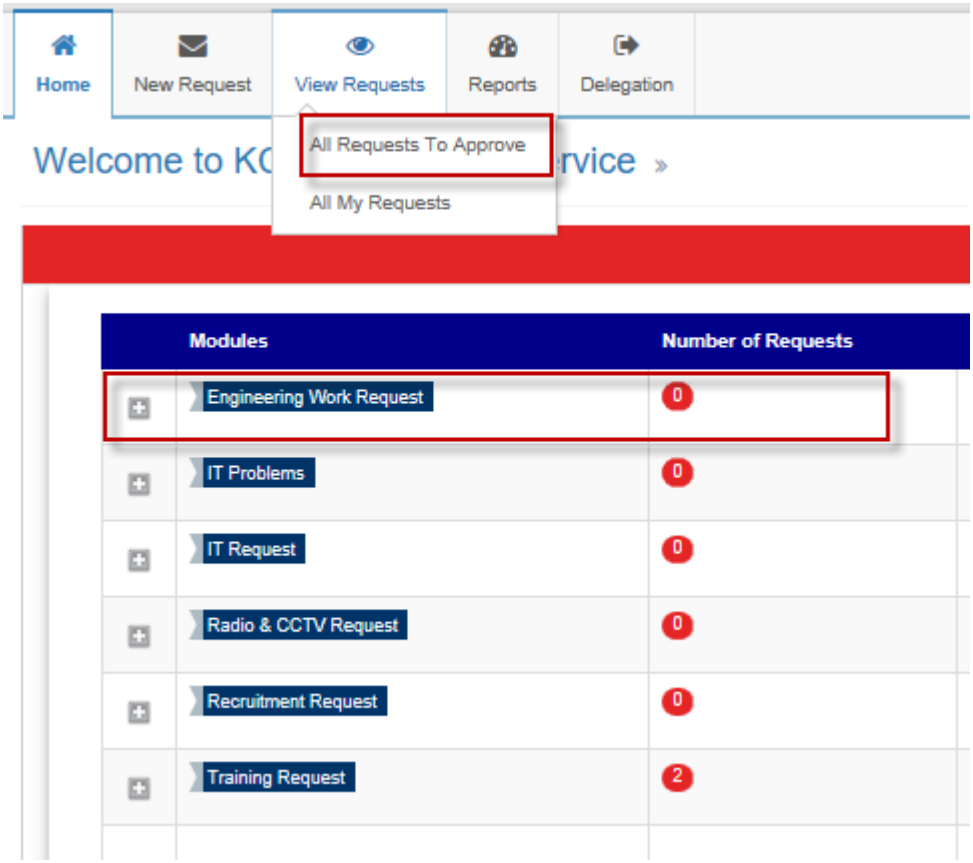

Fig.2

How do you proceed to approve a work request?

- Click on this button  to scroll through the list and see all the requests on which approval is pending.

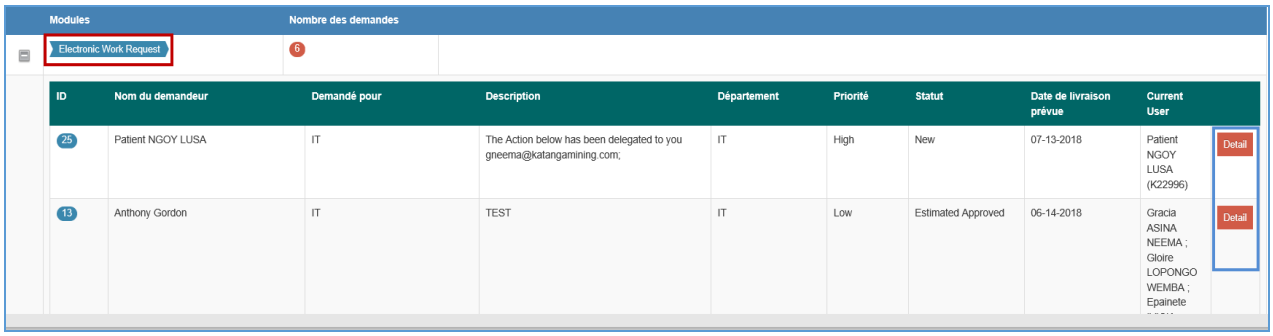

Fig.3

- Then click on the Detail button to see the details of the application before approving it. There are other options such as Reject, or Return the request to the

initiator, or even AdHoc (this button allows the approver to be assisted by a third person for possible verification before approval.

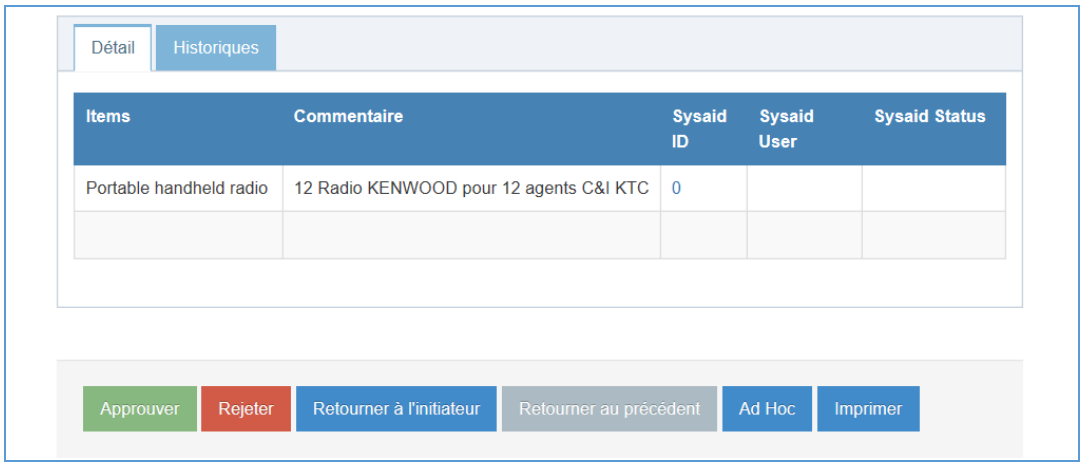

Fig. 4

- There is the Approve estimate button, which allows the last approver in the requesting department to validate the estimated cost of the work requested, in cases where the work to be begun is not budgeted for by the Technical Department.

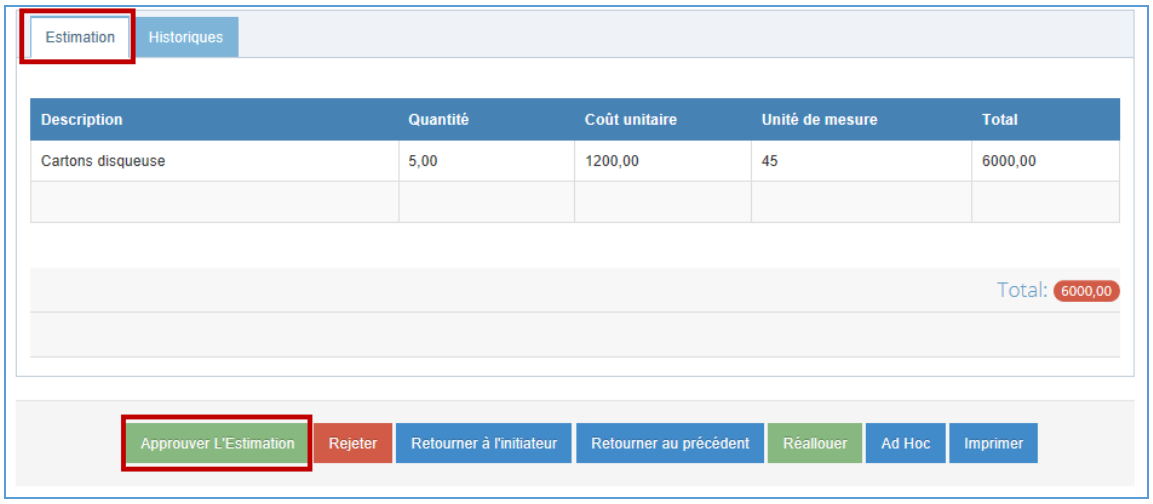

Fig. 5

ALL MY REQUESTS

How do you see requests, which have already been issued?

In order to see the requests already issued, go to the See Requests menu in the sub-menu of **all requests.** This sub-menu allows the user to see all the requests he has already submitted, and which have been returned to him, as well as their approval histories.

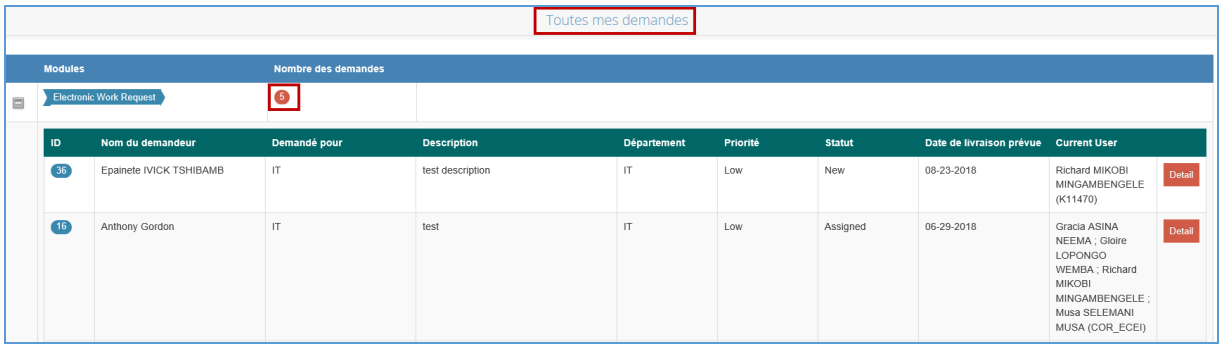

Fig.6

To see the details of his requests, the user must click on the **Detail** button. In cases where a request is returned for correction, he must open the request then click on the **Edit** button to update it and put it back into the circuit.

REPORT IT PROBLEM module

This module is designed to collect the different problems, which some users have encountered with various KCC applications. These problems are registered in the form of incidents, which will be dealt with, by one of the technicians in the IT Department. These problems *will be analysed, dealt with, and the solution will be given to the user*.

- ***How to Report an IT problem***

To submit an IT problem, the user must go to the KCC Request for Service link described above. Go to the ***New request*** menu and select the IT Problem module. The form for a new computer problem will be displayed as below:

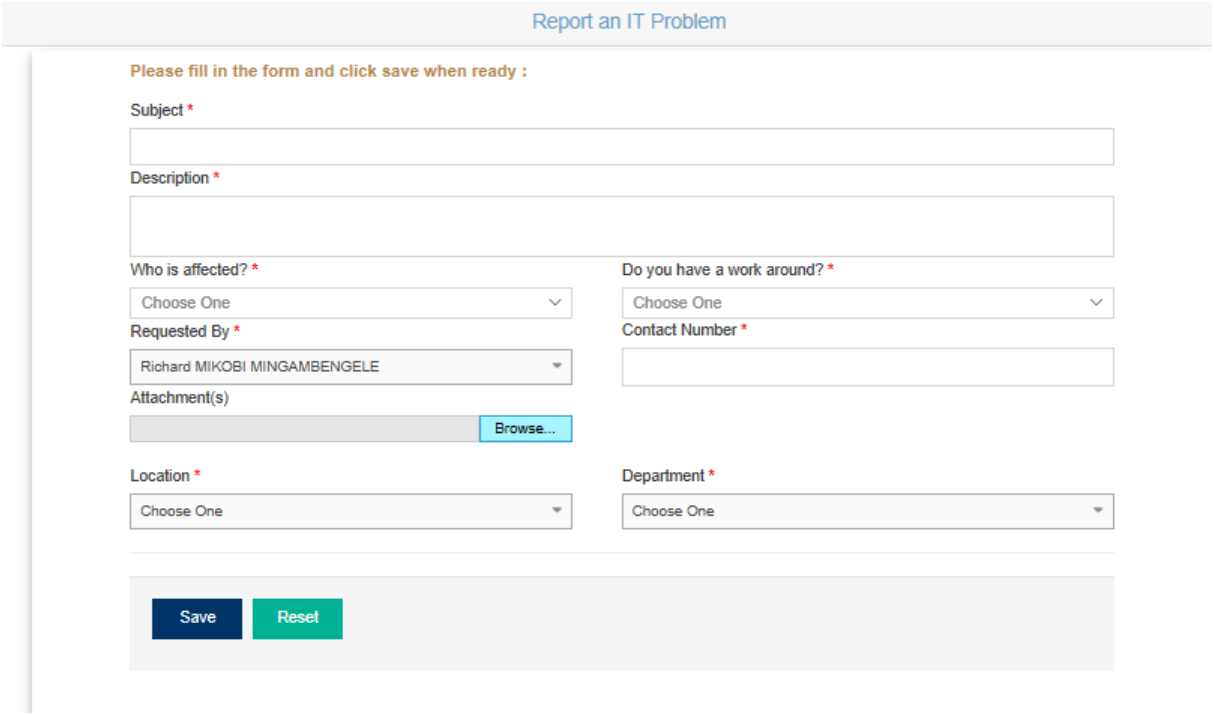

Fig.1

At the top of this form, insert a **Title** for the problem then give the **description** of your problem. You can add your **remarks** and define the **urgency** of the problem, as well as its **impact**. The **Requested by** field takes the name of the user of the machine by default, but in cases where the problem affects another person you only have to scroll down the list and select the person concerned. Fields such as **Attachments** and **Contact number** are very important because they allow the technician to understand the problem easily, or even to contact the user in case of absence from the office; the user's **Location** and **Department** must also be defined.

When all the fields are filled, please save your problem by clicking on the Save button, or on the contrary, click on the Reset button to cancel the registration of the problem

- *How do you see your IT problems?*

Go to the **See *requests*** menu and select the All requests sub-menu. This sub-menu allows the user to see all the problems that he has already submitted.

Fig.2

To see the details of his requests, the user must go to the IT Problem Module. Click on this  **button** to scroll through the list and see all the details.

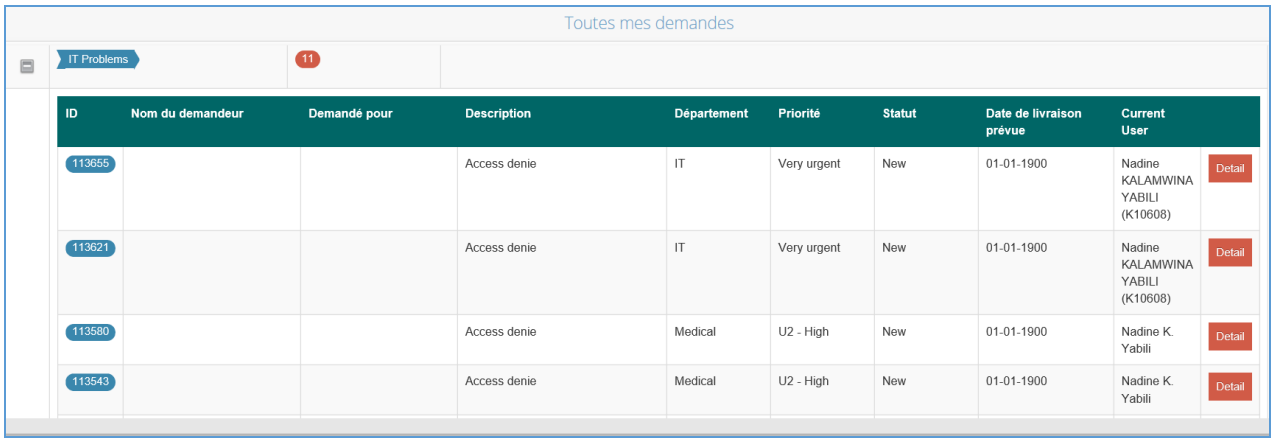

Fig.3

Note: *An IT problem does not require approval: when the user submits his problem, it immediately generates an Incident.*

IT REQUEST module

- ***What does this system offer?***

IT Request is an application from the Department of Information and New Communications Technology–IT–. This application is designed to allow all Kamoto Copper Company–KCC SA– users to submit requests for computer hardware within the department. This system provides features, which allow users to issue requests for computers, telephones, connectivity, software, applications, file sharing and networks.

- ***How do you create an IT Request?***

To create an IT request, the user must go to the ***New Application*** menu and select the module he requests. This opens a form with various tabs, including Computer, Telephone, Connectivity, and Software, Networks …, which allows you to enter the different details of the requisition.

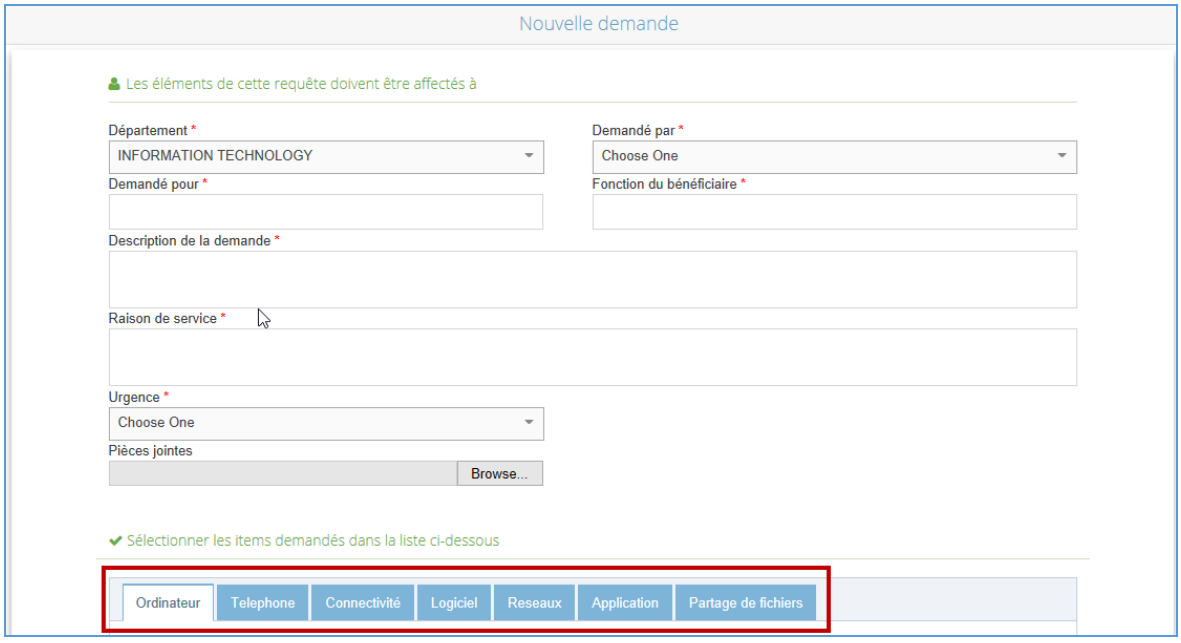

Fig.1

- ***Computer tab***

This contains a list of all items relating to computers. The user may request a new computer, in cases where he has never had one, the replacement of an old one with a new, request other accessories such as a keyboard, a mouse, etc.

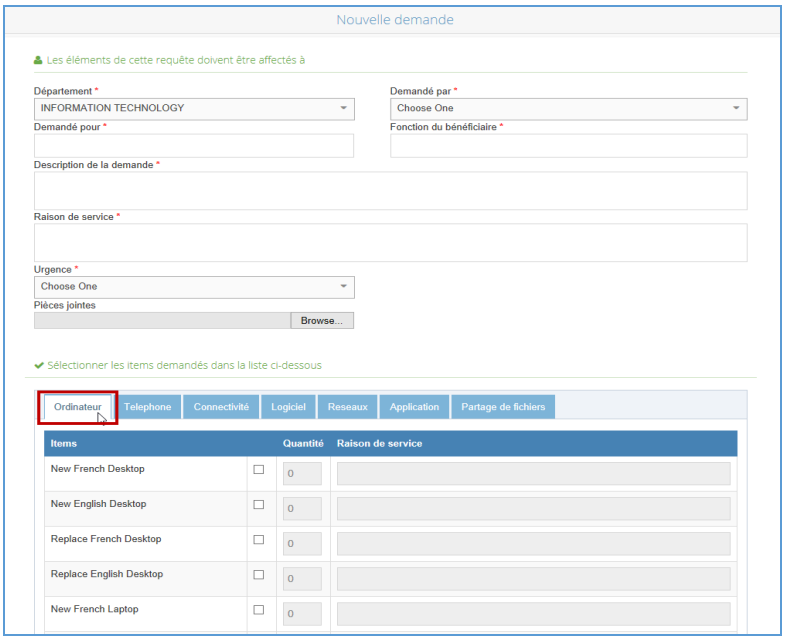

Fig.2

***Note**: Always tick the box for each item selected, and add a comment before saving the request.*

After you have selected the items, scroll to the bottom of the form of the new request, and click on the Save button. The Delete button allows you to cancel the contents of the form for a new request.

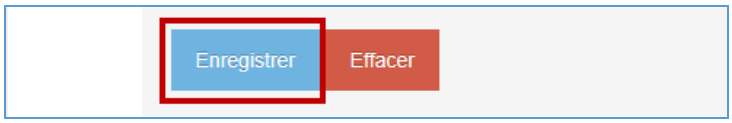

Fig. 3

The two buttons allow the user to save the request or to cancel it if it is no longer required.

Note: All tabs in the New request menu have the same logic in the selection of articles, except:

- ***Connectivity tab***

When the user ticks the ***New User Account Creation*** option, it allows him to add several details about the creation of a new user account and to determine if he is a Non KCC/ICON or a KCC/ICON, to specify his company, select his department, employee number, profession and location as well as his start date.

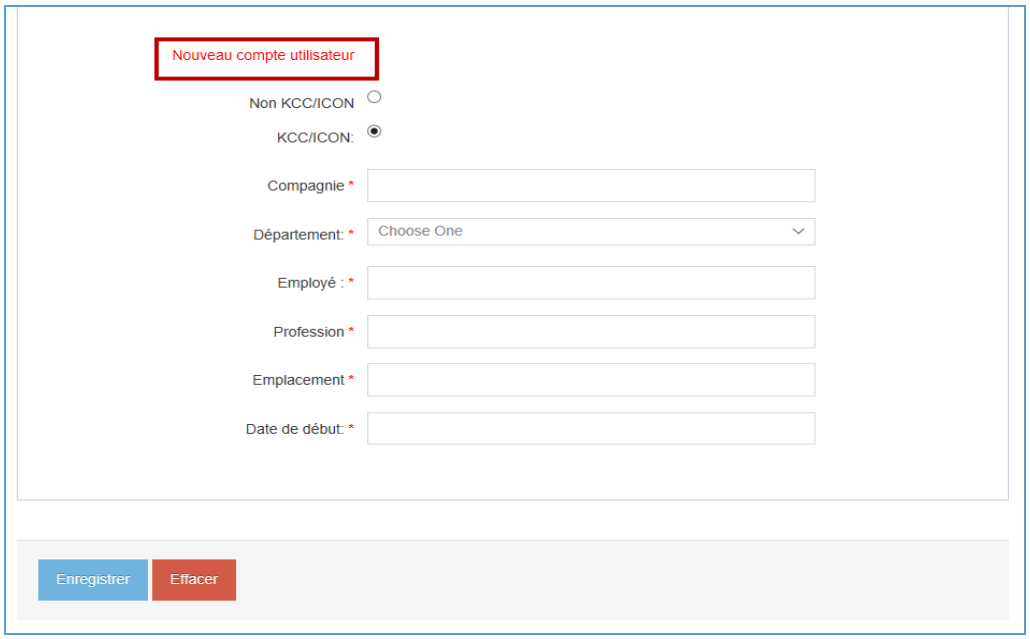

Fig.4

- *Software tab*

This tab allows the user to issue a request for the installation of software. If the user selects the Standard software type of software, a predetermined list is displayed from which he has only to select. Otherwise, the user will need to select the Non-Standard Software type, giving explanations and the name of the software

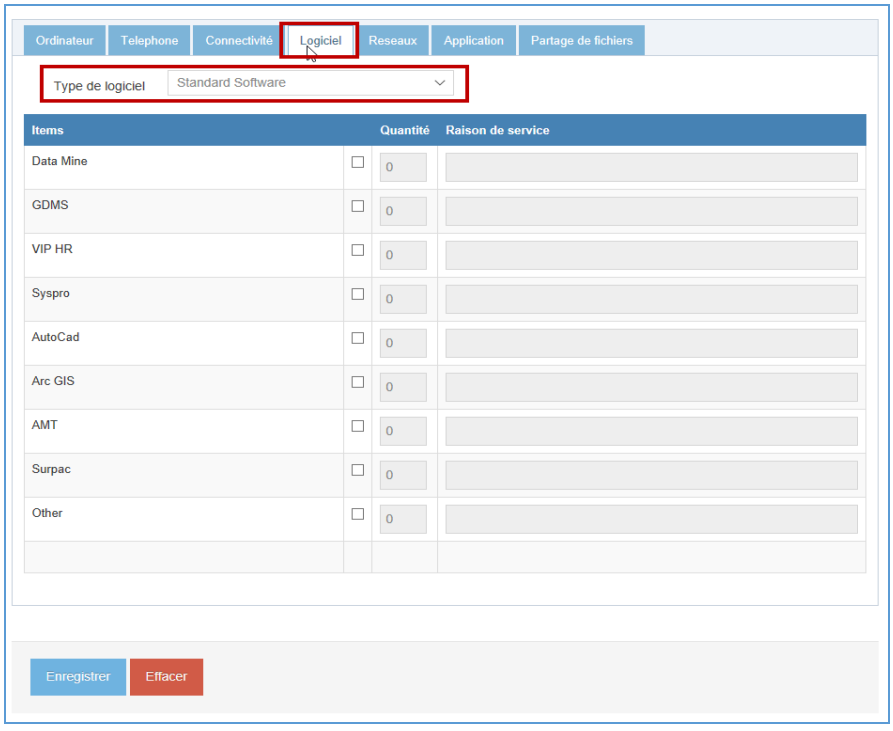

Fig.5

- *Application Tab*

This tab allows the user to issue a request for a change to an existing application or a request for a new application. All he needs to do is to tick either the **Existing Application** or the **New Application** option.

The user will have to fill in all the required fields for the category of the request. If it is an existing application, tick the box by selecting the application concerned in the ***Name of the application*** field and give a description as well as the reason for this change.

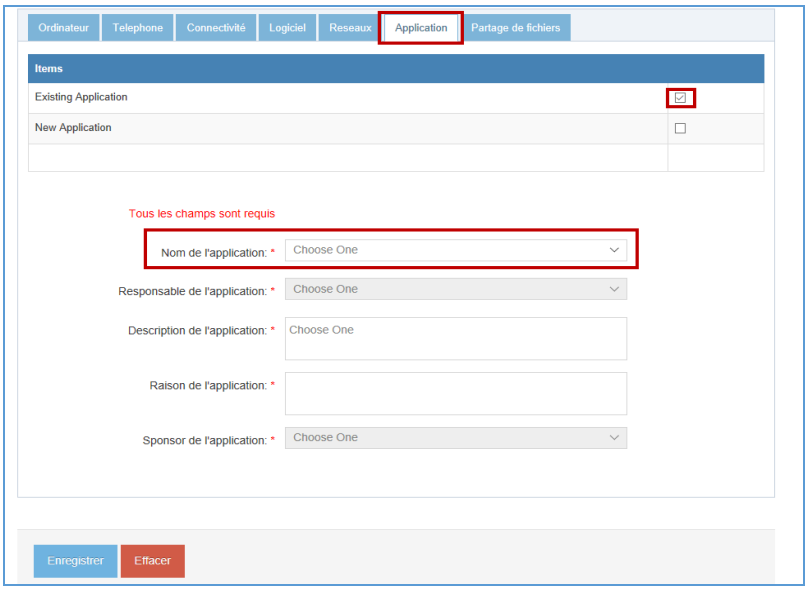

Fig.6

If it is a new application, it is sufficient to tick the **New Application** box, select the Application Manager, put a description as well as the reason for the request for the application and finally designate a sponsor before saving the request.

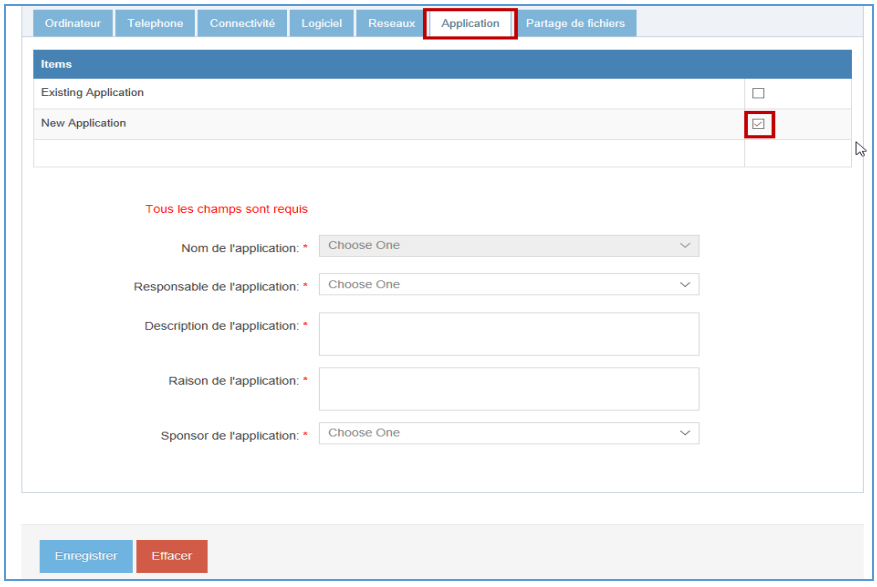

Fig.7

- *File Sharing tab*

This tab allows the user to request access to an existing shared file in his department or to ask for access for user outside KCC. He therefore only needs to tick either the option:

-New File Share Creation

Here the user will have to specify the name of the file and its location, and give the name of the owner of the data.

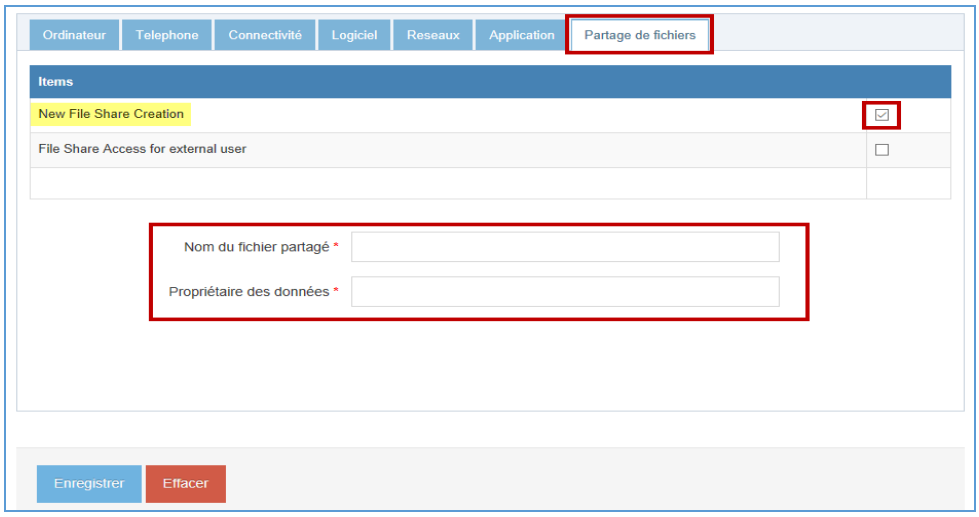

Fig.8

-File Share access for external user

Here it is to request access to a file share for non-KCC users; for example, a consultant, etc. In this case, insert the name of the user and his email address and save the request.

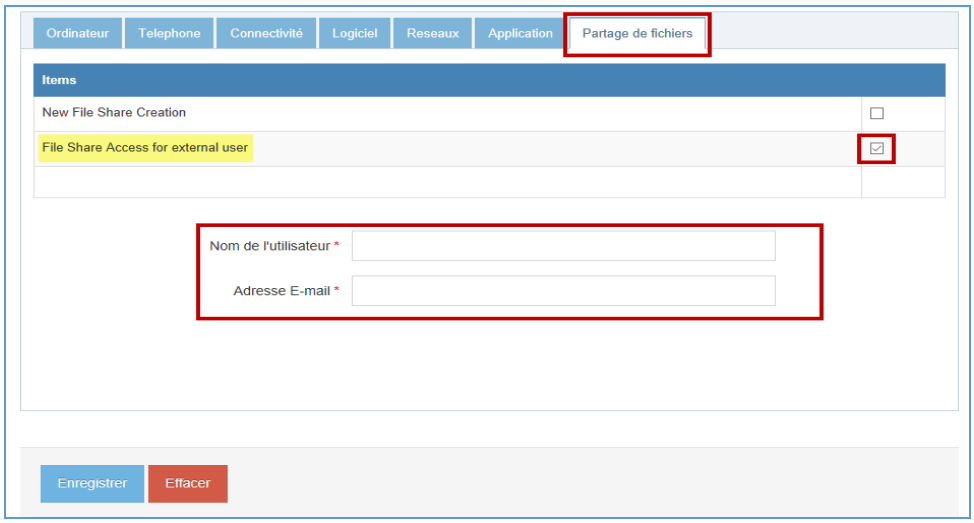

Fig.9

Note: *All fields are must be completed before submitting a request, otherwise the request is not registered.*

REQUESTS TO APPROVE

How do you approve an IT Request?

To approve an IT Request, the approver must click on the ***See requests*** menu, and in the sub-menu **Requests to be approved,** he will see the list of requests on which approval is pending.

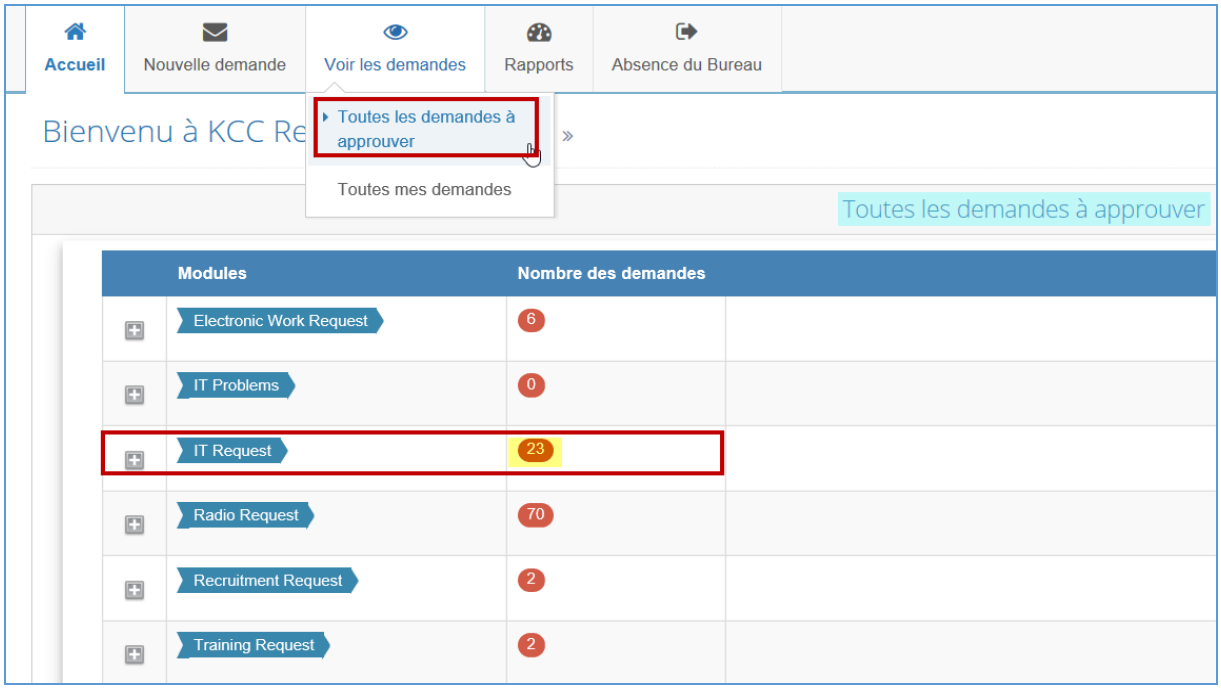

Fig.2

How do you proceed to approve an IT request?

To approve an IT request via the interface, the approver must:

- Click on this button to scroll through the list and see all the requests on which approval is pending.

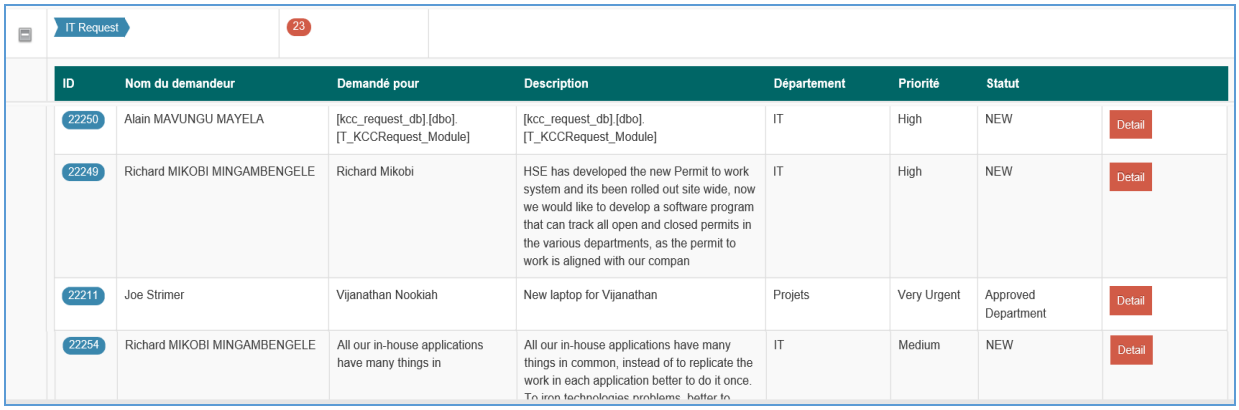

Fig.3

- Then click on the Detail button to see the details of the request before approving it. There are other options such as Reject, or Return the request to the initiator, or even AdHoc (this button allows the approver to be assisted by a third person for possible verification before approval.

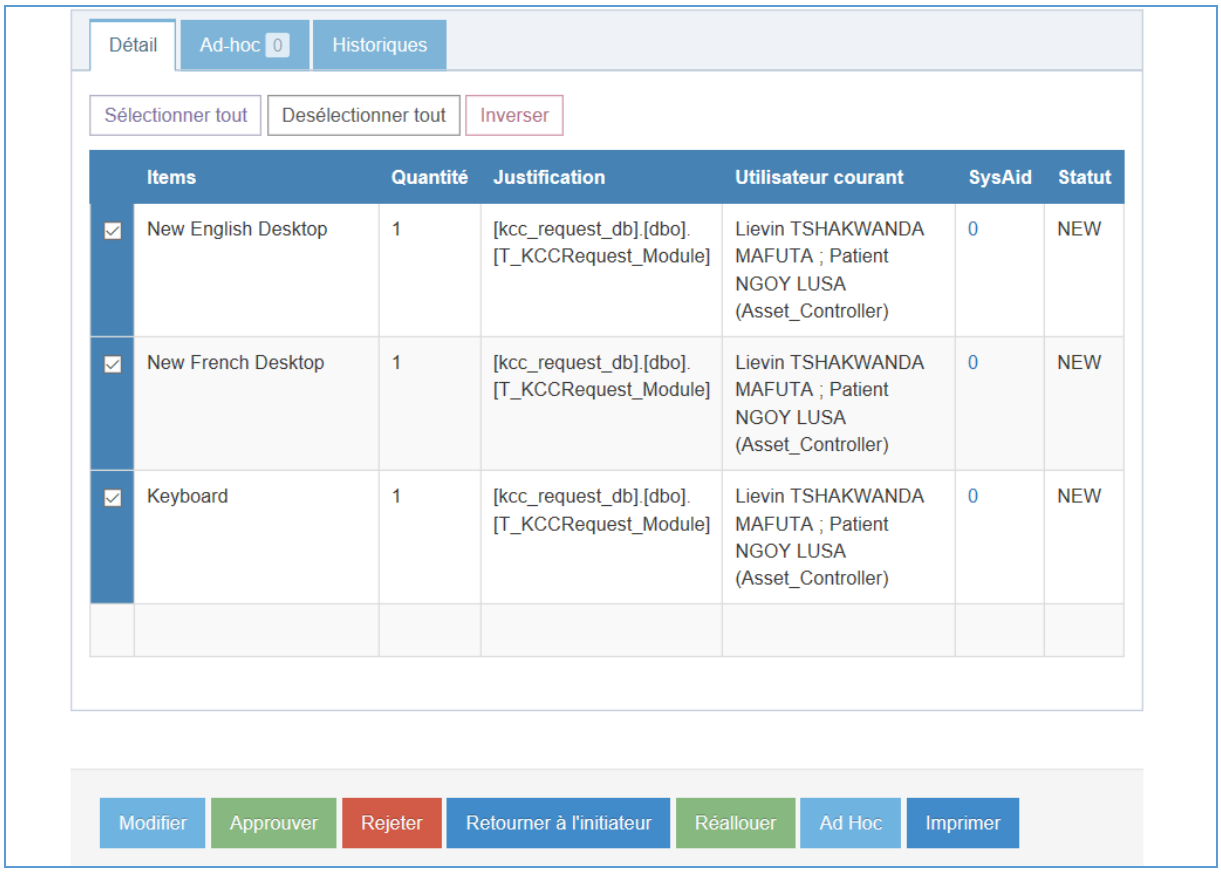

Fig. 4

ALL MY REQUESTS

How do you see requests, which have already been issued?

In order to see the requests already issued, in the menu go to See requests in the **All requests** sub-menu. This sub-menu allows the user to see all the requests, which he has already submitted, and which have been returned to him, as well as their approval histories.

RADIO REQUEST module

- *What does this system offer?*

Radio Request is a feature of KCC Request for Service, designed to help users to submit requests for radios; this new functionality is managed by the Security Department. In this way, any user wishing to get himself a radio will therefore be able to use this module to issue the request.

- *Creation of the request*

- *How do you create a Radio Request?*

To create a radio request, the user will have to go to the ***New Application*** menu and select the Radio Request module. A form with the single tab Radio will open and will allow him to enter the various details of the requisition.

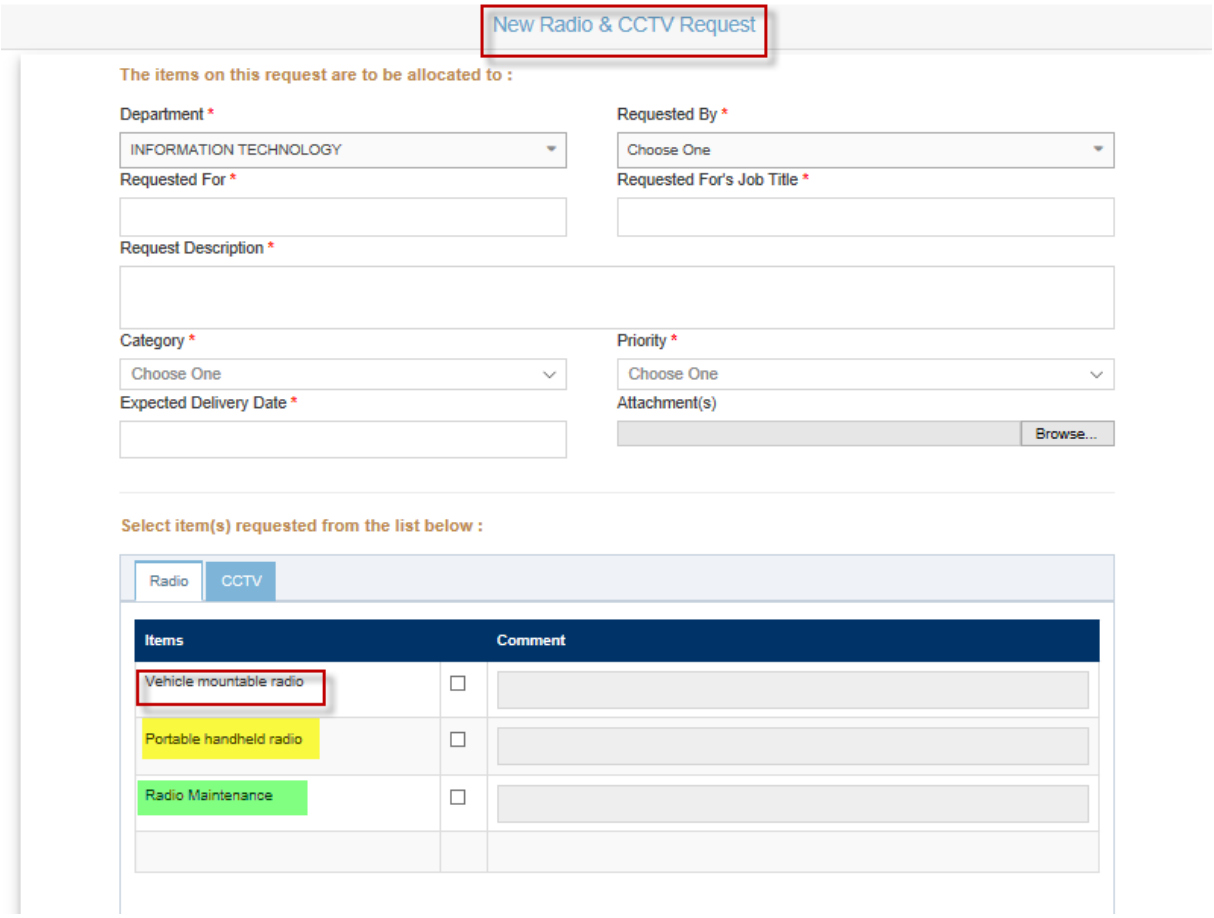

Fig.1

The user will be able to choose according to his needs; between Select a mountable vehicle radio, a portable radio or the maintenance of radios, in the case of a previously acquired radio. All this must be accompanied with a comment and saved at the end of each operation.

REQUESTS TO APPROVE

How do you approve an Electronic request?

The **Requests for approval** are in the ***See the applications*** menu, a sub-menu that allows the approver to see all the requests on which approval is pending in his Inbox. The images below illustrate how to access it.

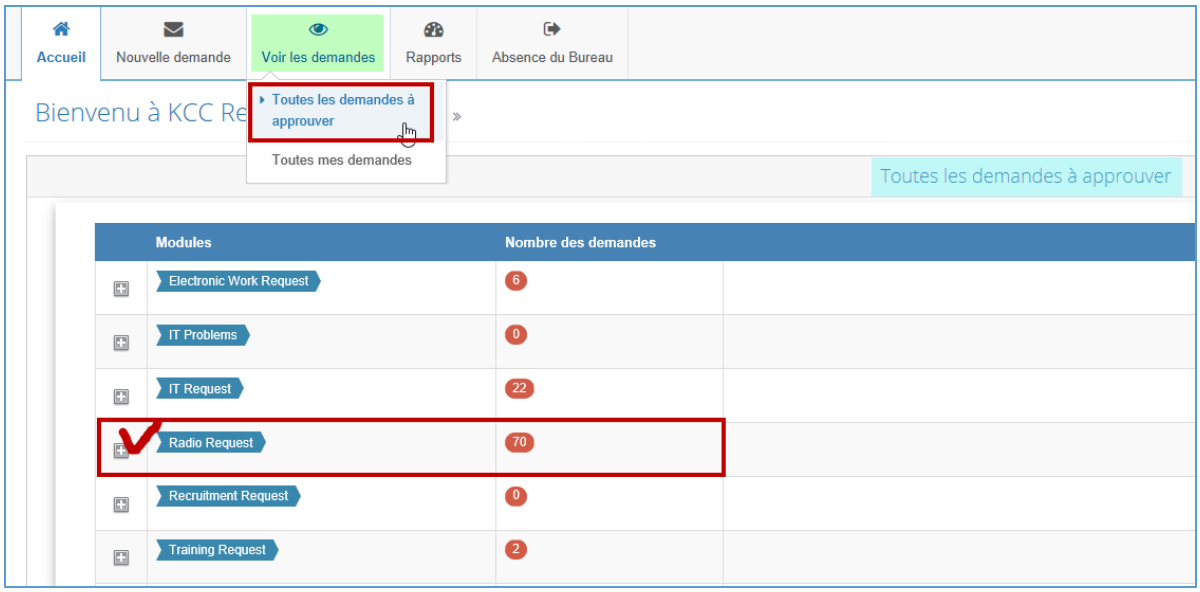

Fig.2

You only have to click on this  **button** to scroll through the list and see all the requests on which approval is pending.

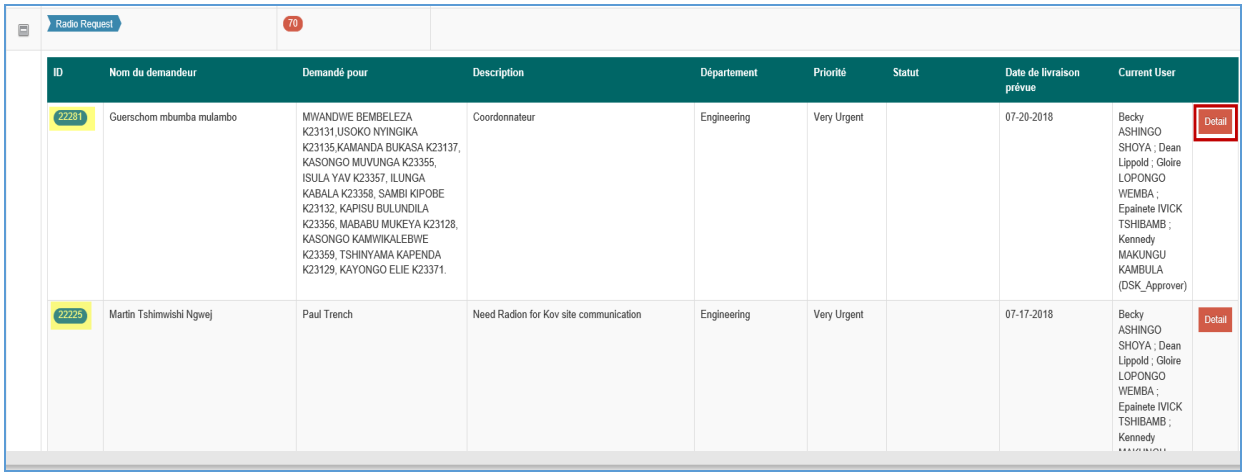

Fig.3

The approver has to click on the Detail button to see the details of the request before approving it. There are other options such as Reject or Return the application to the initiator.

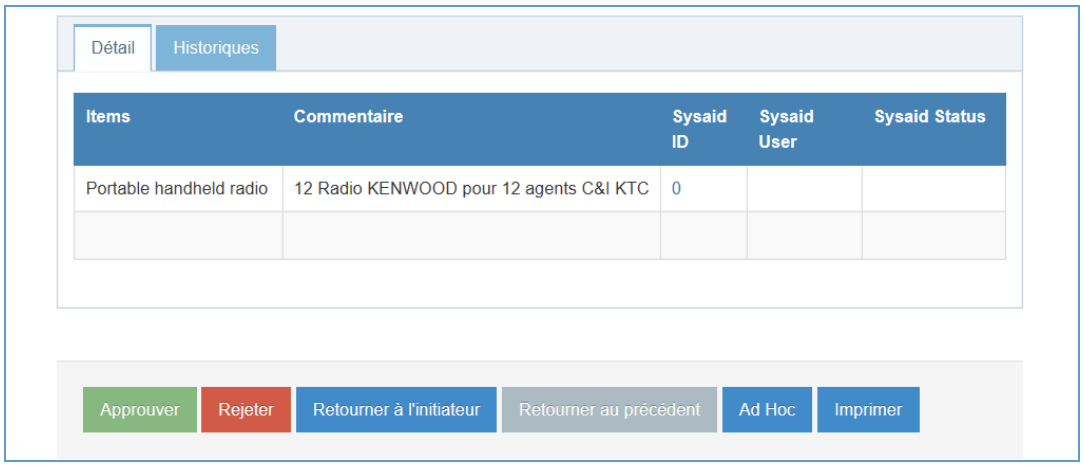

Fig. 4

ALL MY REQUESTS

How do you see your requests?

This sub-menu allows the user to see **All requests** which he has already submitted, and which have been returned to him, as well as their approval histories.

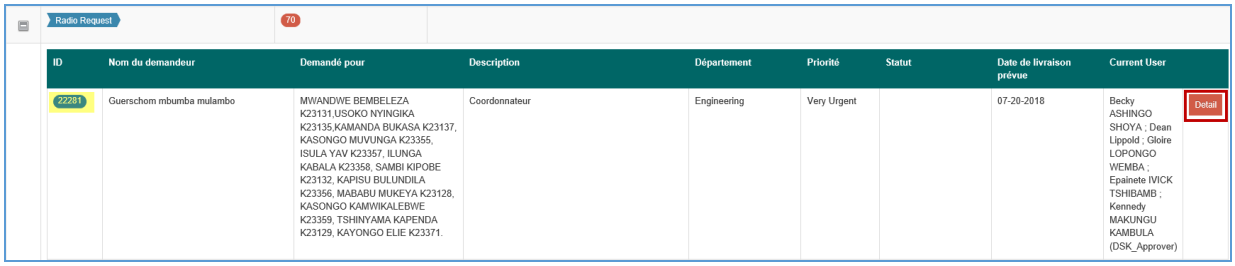

Fig.5

To see the details of his requests, the user must click on the **Detail** button. In cases where a request is returned for correction, he must open the request then click on the **Edit** button to update it and put it back into the circuit.

RECRUITMENT REQUEST module

This module is an application designed for the input and approval of requests for recruitment by KCC Human Resources. It is accessible from any workstation with a web browser and access to Katanga Mining services.

- *What does this system offer as a feature?*

  - It allows you to submit requests for recruitment in a confidential manner. Approvers and initiators can then view the applications, supporting documents relating thereto–Organisation Charts, Job Description, etc.–
  - It also allows the initiators to be aware of individual and common comments, which the approvers address to them in the approval history.
  - It is a secure application. Users only have access to the information, which is dedicated to them. The communication link, which connects the workstation users to the system, is secure.
  - The system allows users to monitor approvals and to know the name of the approver and the position of an approved request, or of one not yet processed.
  - The system allows users to have the information on their requests for recruitment in a timely manner and, if necessary, make a report.
  - The system also enables users to determine whether it is a replacement request or not.

- *Creation of the request*

To create a new recruitment request, click on the New Application menu and select the Recruitment Request Module. The form for creating a new recruitment request–below–will open with different sections to be filled in by the user before he saves the request:

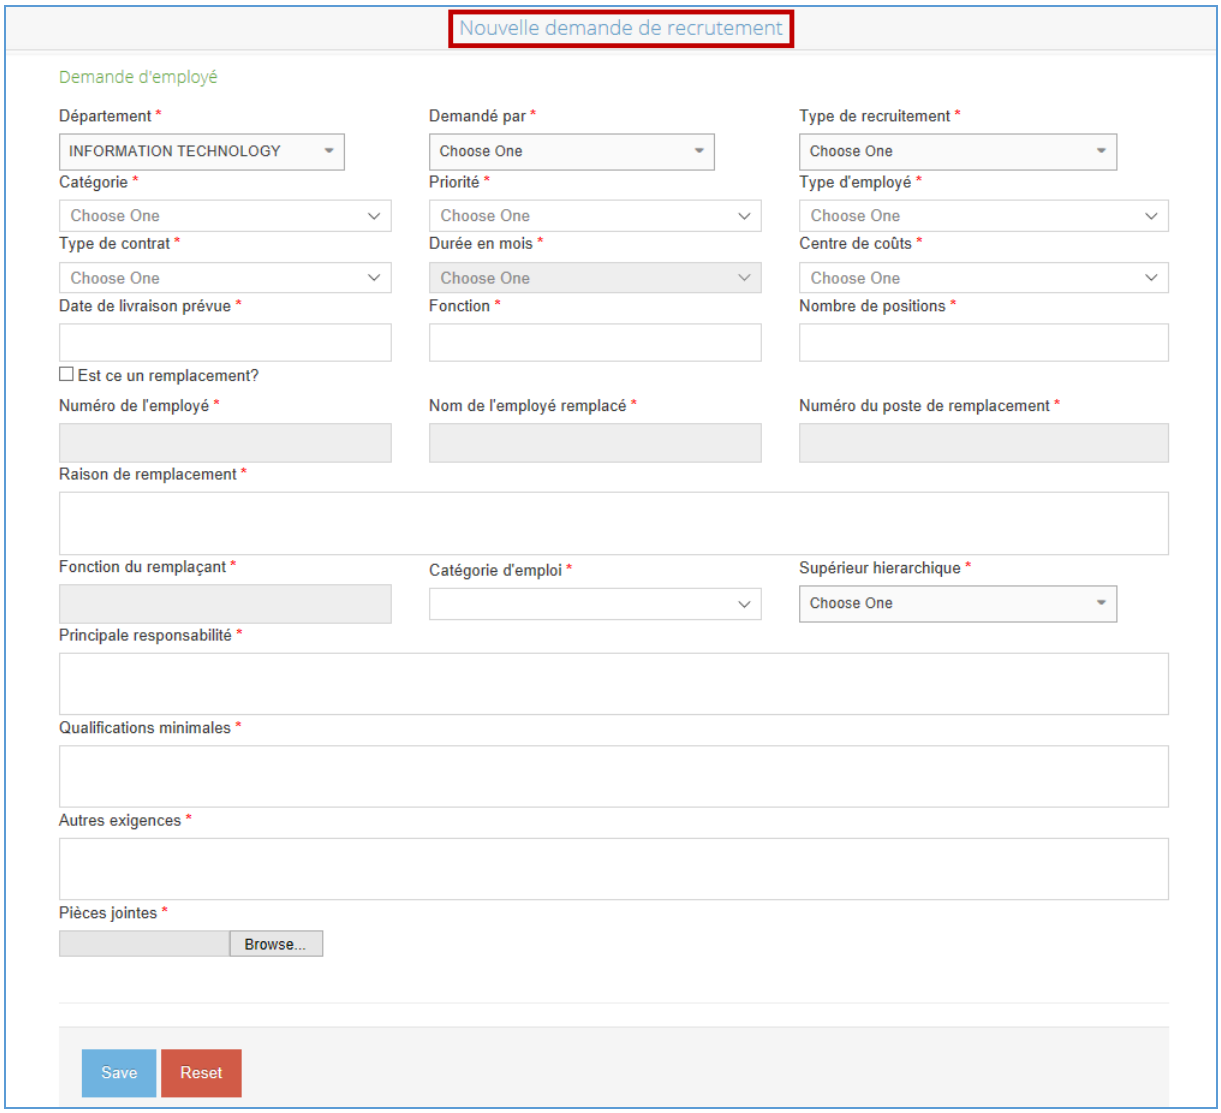

Fig.1

Note: *When it is not for a replacement, the fields such as Employee number, Name of replaced employee, Number of replacement job or even Post of the replacement will be greyed out, and the Reason for replacement field will not require a comment; but in the contrary case, all fields must be filled in.*

- ***How do you attach documents to a request?***

To attach the document describing the new recruit's work, click on the Browse... button: Windows Explorer opens.

Select your document, the selected file is listed in the text box located to the left of the Browse button, then click on Open, and the file will be loaded directly.

After he has filled in all the required fields on the type of request, the user clicks on the Save button to save the request, otherwise he must click on the Reset button to cancel it.

- *How do you edit a work request?*

Note:

- *Only the initiator and the CEO are able to modify a request*
- *The initiator can only change a request at his own position–in his Inbox–; this may be returned to him by an approver or reallocated by the system administrator.*

APPROVERS

- *How do you approve a recruitment request?*

Select the request to be approved in the See requests menu; go to **All requests** to be approved and select the Recruitment Request module. At the side, you have the number of requests to be approved. Click on the button  to see the list of applications then on Detail. This button allows you to read the details of the request.

You then have the opportunity to approve, reject or return the request to the initiator: these three actions are only available to a user having approval rights.

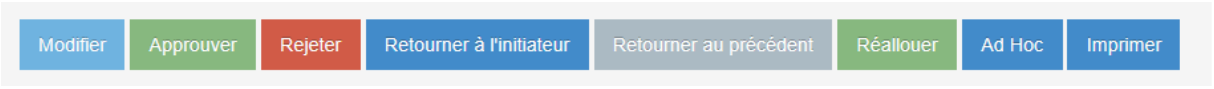

Fig.2

There is also AdHoc–this button allows the approver to be assisted by a third person for possible verification before approval.

By clicking on one of the above buttons, a window opens; add a comment and click OK, and the request will be validated, rejected or returned, depending on the action performed.

TRAINING REQUEST module

This Training Request module allows users to submit applications for different training courses to improve their performance in the exercise of their functions.

How does it work?

- ***Creation of the request***

To make a request for training, go to the ***New Application*** menu and select the Training Request module; the form for the creation of a request for training will open. See below:

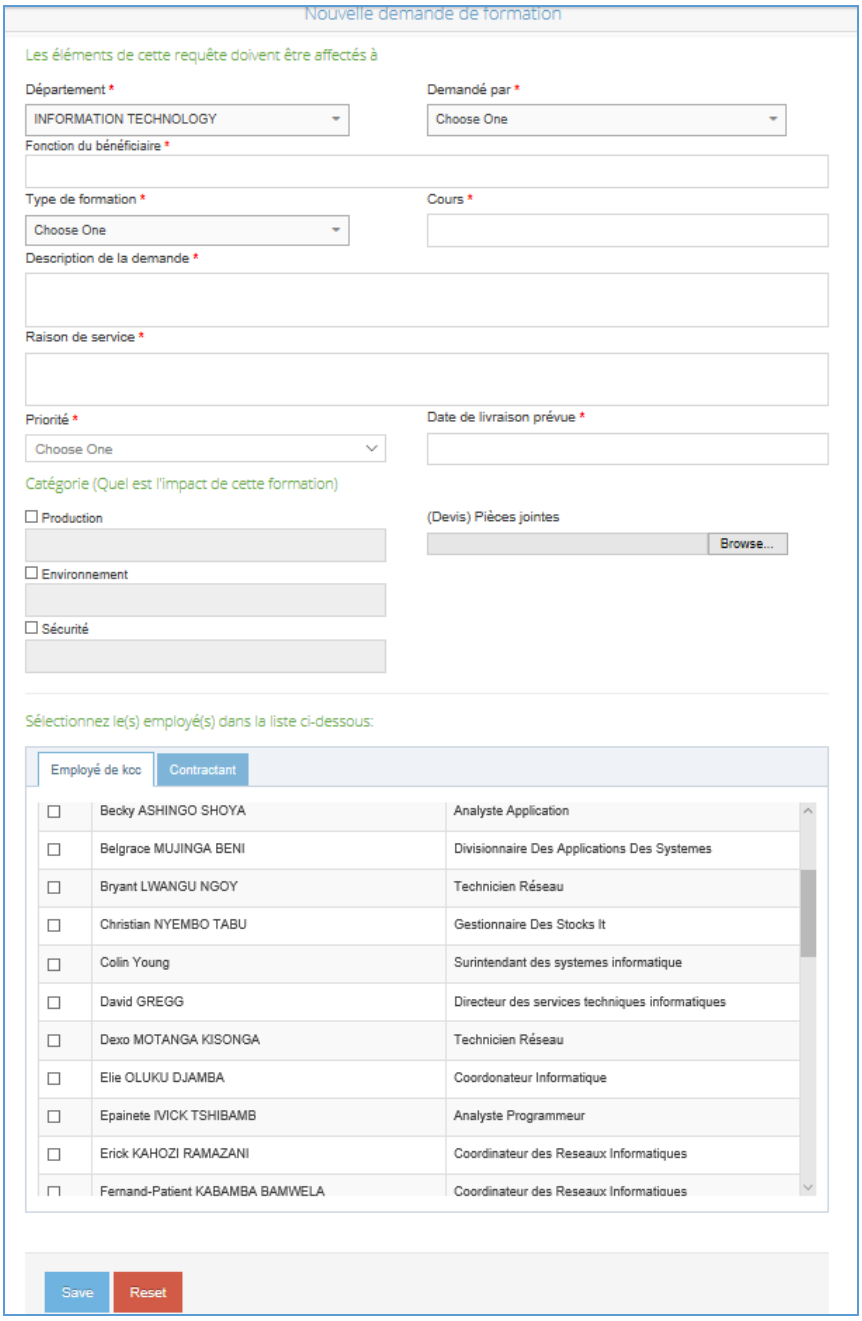

Fig.1

This request may be made for KCC agents or for contractors. If you want to include these last, i.e. the contractors, you will have to go to the Contractor tab and then select the company concerned.

Fig.2

Once the company is selected, the list of the employees concerned is automatically displayed. You only have to tick the agents who should follow the training course.

- In the Requested by field, fill in the name of the employees' manager, who may be different from the person who completes the form?
- In the Type of training field, select either Internal, when a training course is internal, or External, when the training course must be followed outside KCC.
- In the Course field, you must manually fill in the name of the course.

Select the trainees from the tables below:

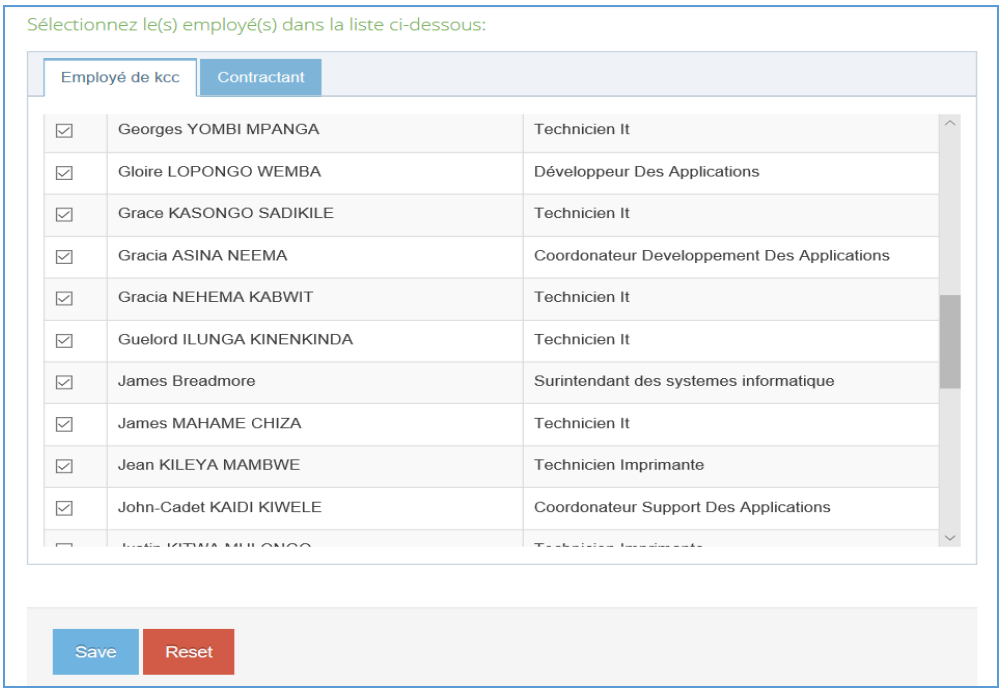

Fig.3

Before saving, verify the accuracy of the information that you have entered. Finally, click on Save to submit your request.

REQUESTS TO APPROVE

How do you approve a training request?

The **Requests for approval** are in the ***See requests*** menu, a sub-menu that allows the approver to see all the requests on which approval is pending in his Inbox. The images below illustrate how to access it.

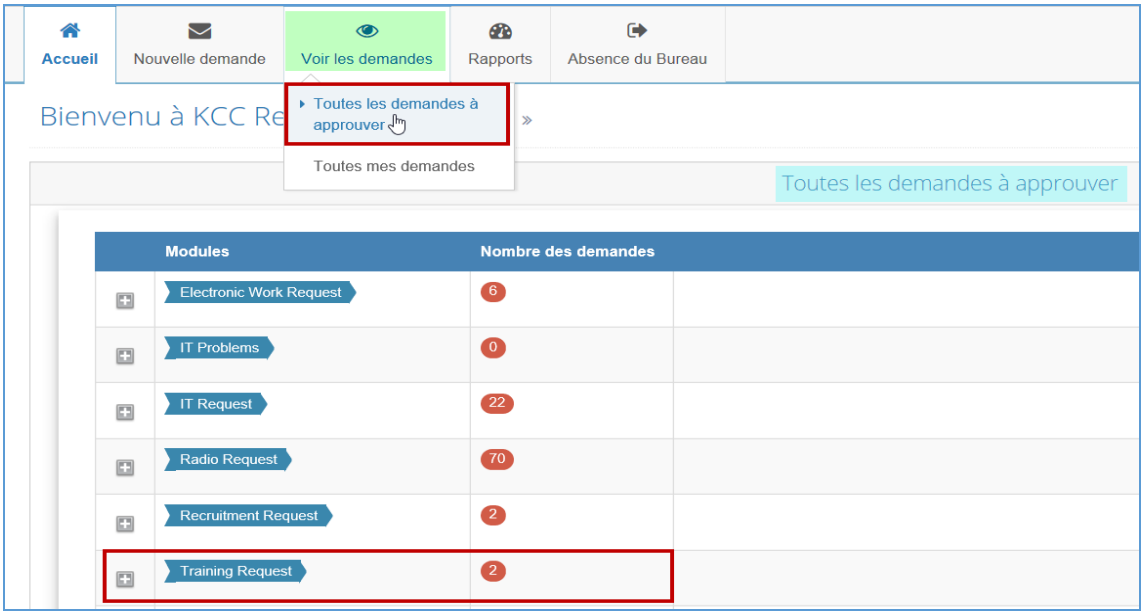

Fig.4

You only have to click on this button to scroll through the list and see all the requests on which approval is pending.

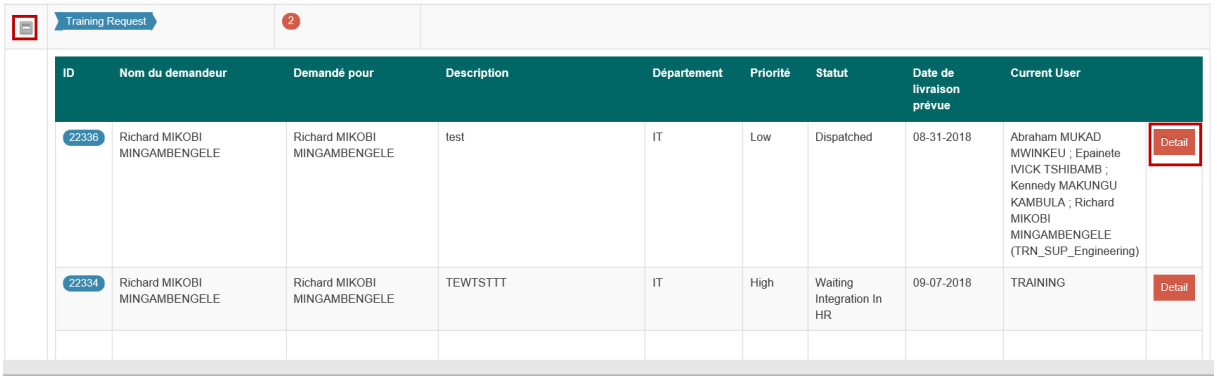

Fig.5

The approver has to click on the Detail button to see the details of the request before approving it. There are other options such as Reject or Return the application to the initiator.

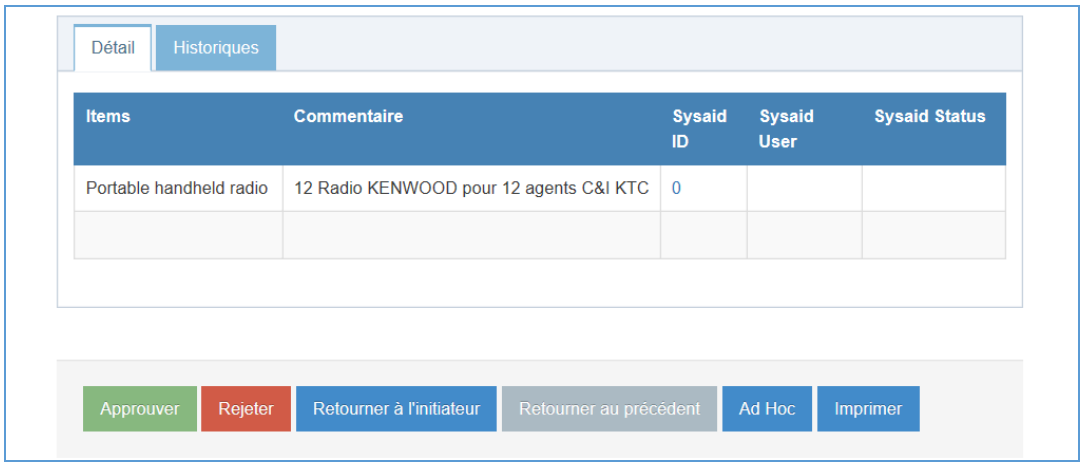

Fig. 4

ALL MY REQUESTS

How do you see your requests?

This sub-menu allows the user to see **All requests**, which he has already submitted, and which have been returned to him, as well as their approval histories.

Fig.5

To see the details of his requests, the user must click on the **Detail** button. In cases where a request is returned for correction, he must open the request then click on the **Edit** button to update it and put it back into the circuit.

- *Treatment of the request for training*

  - *The Training Department Administrator, whose duty it is to check the compliance of the application before it is forwarded to the training manager to be processed, will filter all requests.*

  - *Requests for external training will require the approval of the Training Director before they are processed. This is automatically transmitted by the system.*
